Work Experience

Full-Stack Engineer @Awesomity Lab

Back-End Engineer @Awesomity Lab
01/2022 - Present, Hybrid

- Onboarded Intranet company clients, gathered and analyzed requirements, and developed the frontend for their CRM application.
- Continuously fixed arising bugs and optimizing database queries, logical implementation, and response payload to improve API performance for a job matching platform, resulted in the complete elimination of bugs and a 40% decrease in response time.
- Automated the GitLab CI/CD pipeline for various applications, leveraging Grafana-Prometheus and Sentry to monitor cloud environment and track errors.
- Tools and Technologies: TypeScript, NestJS, NextJS, Postgres, Swagger API, Gitlab (CI/CD), Docker, Grafana, Sentry, Jmeter, AWS EC2

Lead Back-End Engineer @Executive Assist Africa
01/2022 - 08/2022, Kenya - Remote

- Led the development of backend APIs for a Health-centa MS, resulting in the successful release of the MVP.
- Collaborated with the M-Pesa team to integrate their payment service into our platform.
- Performed code reviews for apprentice developers to ensure code quality and proper implementation of functionalities.
- Tools and Technologies: NodeJS, ExpressJS, Mysql, Swagger API, Github, Digital Ocean

Freelance Developer @Self Employed & Guavahire inc.
09/2020 - 11/2021, Hybrid

- Developed and set up a customized POS application for 2 restaurants to effectively manage and monitor their stock and sales.
- Developed and deployed the applix.africa website on the Infomaniak cloud server.
- Utilized React to develop front-end interfaces for graduate student projects and side projects.
- Utilized Laravel to develop the guavahire.com platform and successfully deployed it on AWS EC2 instance.

Software developer, @Andela
02/2020 - 07/2020, Remote

- Worked within a team of 5 members to develop an accommodation booking web application.
- Analyzed user requirements and designed system mockups to ensure the assigned tasks met user's needs.
- Wrote integration tests and performed linting to improve the quality and reliability of the backend modules.
- Documented APIs using Swagger to streamline integration process.
